

THE TWELVE FACTORS QUESTIONNAIRE

Based on the "The Twelve-Factors App", <https://12factor.net/>.

1. **Codebase:** is only one codebase tracked in revision control, with many deploys?

<https://12factor.net/codebase>

2. **Dependencies:** do you explicitly declare and isolate dependencies?

<https://12factor.net/dependencies>

3. **Config:** do you store configuration in the environment (variables)?

<https://12factor.net/config>

4. **Backing services:** do you treat backing services as attached resources (make no distinction between local and third party services)?

<https://12factor.net/backing-services>

5. **Build, release, run:** do you maintain strict separation between build, release and run stages?

<https://12factor.net/build-release-run>

6. **Processes:** do you execute the app as one or more stateless processes?

<https://12factor.net/processes>

7. Port binding: do you export services via port binding (e.g. export HTTP as a service by binding to a port)?

<https://12factor.net/port-binding>

8. Concurrency: do you scale out via the process model?

<https://12factor.net/concurrency>

9. Disposability: do you maximize robustness with fast startup and graceful shutdown?

<https://12factor.net/disposability>

10. Dev/prod parity: do you keep development, staging, and production as similar as possible?

<https://12factor.net/dev-prod-parity>

11. Logs: do you treat logs as event streams?

<https://12factor.net/logs>

12. Admin processes: do you run admin/management tasks as one-off processes?

<https://12factor.net/admin-processes>
